Overview

I am a fourth year PhD candidate in Mathematics at Duke University. I study mathematical biology, focusing on the mathematical modeling of human physiological processes to answer and inform questions in medicine. I plan to obtain a career in the biotech/pharmaceutical industry after graduation and am interested in PK/PD and QSP modeling for drug development.

  Thesis: A Mathematical Model of Pancreatic Cancer Growth and Response to Treatment
  Advisor: Professor Huijing Du

Professional Experience

- **FDA QSP Research Fellow** Present
  Developing a QSP model for patients with PNH to provide insights into the underlying mechanisms of the disease, effects of current treatments, and potential therapeutic interventions.
  Responsibilities: virtual population generation, parameter estimation & calibration, sensitivity analysis, intensive literature review, QSP model generation, and presenting work in project team meetings.

- **Simulations Plus QSP Modeling Intern** Summer 2024
  Supported the development of the BIOLOGXsym platform, a QST software focused on complex macromolecule liver safety. My primary focus was incorporating the downstream effects of Nivolumab on the adaptive immune system and its impact on liver toxicity within BIOLOGXsym.
  Responsibilities: data fitting, parameter estimation, sensitivity analysis, intensive literature review and subsequent integration of key mechanisms in model, and presenting work in project team meetings.

- **Johnson & Johnson Clinical Pharmacology and Pharmacometrics Intern** Summer 2023
  Supported the development of co-stimulatory combinations of T cell redirectors for treatment of lymphoma through mechanistic mathematical modeling.
  Responsibilities: data fitting, parameter estimation, intensive literature review and subsequent integration of key mechanisms in model, and presenting work in project team meetings.
