Overview

I am a fifth-year PhD candidate in Mathematics at Duke University, where I develop mechanistic models to understand complex biological systems and guide decisions in human health. My research integrates quantitative methods with physiological insight, and I am motivated to translate this expertise to pharmacometrics, supporting model-informed drug development from early clinical phases through regulatory submission.

Education

Duke University

Defense March 2026

PhD in Mathematics, Advisor: *Professor Michael C. Reed*

Thesis: *Mechanistic Mathematical Models of Sex Differences and Oxidative Stress in Health and Disease*

University of Nebraska-Lincoln

May 2021

BS in Mathematics and Biochemistry with Highest Distinction

Thesis: *A Mathematical Model of Pancreatic Cancer Growth and Response to Treatment*

Professional and Research Experience

PhD Researcher, Duke University

2021 - Present

- Created mechanistic models of hepatic oxidative stress management to study sex differences and the differential effects of estradiol supplementation in pre- and post-menopausal women on key metabolites.
- Uncovered glutathione-mediated mechanisms of sex differences in acetaminophen toxicity.
- Investigated the interaction of serotonin and dopamine in Parkinson's Disease, revealing serotonin as a biomarker.

Mathematical Modeling Consultant, Zyphore Therapeutics

2025 - Present

- Designed and calibrated mechanistic models of metabolic processes to support drug discovery strategy.
- Delivered modeling insights in regular reports to align computational and experimental objectives.

FDA QSP Research Fellow

2024- Present

- Refined an established QSP model of the Alternative Complement Pathway in Paroxysmal Nocturnal Hemoglobinuria (PNH) to capture therapy effects on disease biology.
- Validated model predictions against Phase 3 complement inhibitor trials, ensuring accurate prediction of PK/PD endpoints, biomarkers and supporting mechanistic interpretation of therapy effects.

Simulations Plus QSP Modeling Intern

Summer 2024

- Integrated the downstream effects of Nivolumab on the adaptive immune system and its impact on liver toxicity within BIOLOGXsym, a QST software designed for large molecule liver safety.
- Generated and analyzed virtual patient populations to evaluate how T cell variability influences different mechanisms of Nivolumab-related liver toxicity.
- Parameterized drug-induced liver toxicity mechanisms using LAMPs organ-on-a-chip experimental data to support translational safety modeling.

Johnson & Johnson Clinical Pharmacology and Pharmacometrics Intern

Summer 2023

- Incorporated novel mechanisms of immunological synapse formation into a mechanistic model of T cell re-directors for lymphoma treatment.
- Implemented and tested co-stimulation hypotheses to evaluate potential combination strategies.

Awards

FDA ORISE Fellowship

November 2024 - Present

Best Collaborative Project at ISoP QSP SIG Student Symposium

Summer 2025

Top 5 Data Science Project in Erdős Data Science Bootcamp

Fall 2024

Project: [Thrive or Survive: Predicting the Health of Trees following Forest Fires](#)

AWM Poster Award at SIAM Annual Meeting (Honorable Mention)

Summer 2024 (Summer 2025)

SIAM Student Chapter Certificate of Recognition

2024

NSF RTG Research Assistantship *Duke Applied Math RTG* (\$42,000)

Spring 2023, 2024, 2025

Presentations

Sex Differences in Glutathione and Oxidative Stress

University of Florida Biomathematics Seminar - Invited Talk

Fall 2025

ACoP Trainee Communication Challenge - 5 Minute Flash Talk

Fall 2025

ACoP - Contributed Poster

Fall 2025

SIAM Annual Meeting - Contributed Poster and Invited Talk

Summer 2025

ISoP QSP Special Interest Group Student Symposium - Contributed Talk

Summer 2025

SIAM Dynamical Systems - Invited Talk

Summer 2025

ICERM Workshop on Uncertainty Quantification - Contributed Poster

Summer 2025
